Basic Python

1. Split this string

```
s = "Hi there Sam!"
```

```
s = "Hi there Sam!"
s.split()
```

```
['Hi', 'there', 'Sam!']
```

2. Use .format() to print the following string.

Output should be: The diameter of Earth is 12742 kilometers.

+ Code + Text

```
planet = "Earth"
diameter = 12742
```

```
planet = "Earth"
diameter = 12742
"The diameter of {} is {} kilometers.".format(planet,diameter)
```

```
'The diameter of Earth is 12742 kilometers.'
```

3. In this nest dictionary grab the word "hello"

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
```

```
d = {'k1':[1,2,3,{'tricky':['oh','man','inception',{'target':[1,2,3,'hello']}]}]}
d['k1'][3]['tricky'][3]['target'][3]
```

```
'hello'
```

Numpy

```
import numpy as np
```

4.1 Create an array of 10 zeros?

4.2 Create an array of 10 fives?

```
import numpy as np
arr = np.zeros(10)
arr
```

```
array([0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

```
import numpy as np
ar = np.ones(10)*5
ar
```

```
array([5., 5., 5., 5., 5., 5., 5., 5., 5., 5.])
```

5. Create an array of all the even integers from 20 to 35

```
print(np.arange(20,36,2))
```

```
[20 22 24 26 28 30 32 34]
```

6. Create a 3x3 matrix with values ranging from 0 to 8

```
np.arange(0,9).reshape((3,3))
```

```
array([[0, 1, 2],
       [3, 4, 5],
       [6, 7, 8]])
```

7. Concatenate a and b

a = np.array([1, 2, 3]), b = np.array([4, 5, 6])

```
import numpy as np
a = np.array([1, 2, 3])
b = np.array([4, 5, 6])
c = np.concatenate((a,b))
print(c)
```

```
[1 2 3 4 5 6]
```

Pandas

8. Create a dataframe with 3 rows and 2 columns

```
import pandas as pd
```

```
import pandas as pd
df = pd.DataFrame({'A':[2,4,6], 'B':[8,10,12]},index = ['x','y','z'])
print(df)
```

```
   A   B
x  2   8
y  4  10
z  6  12
```

9. Generate the series of dates from 1st Jan, 2023 to 10th Feb, 2023

```
import datetime
day_delta = datetime.timedelta(days=1)

start_date = datetime.datetime.strptime("01-1-2023", "%d-%m-%Y")
end_date = start_date + 41*day_delta

for i in range((end_date - start_date).days):
    print(start_date + i*day_delta)
```

```

10. Create 2D list to DataFrame

lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]

```
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
```

```
import pandas as pd
lists = [[1, 'aaa', 22], [2, 'bbb', 25], [3, 'ccc', 24]]
d_list = pd.DataFrame(lists,columns =['A','B','C'])
d_list
```

	A	B	C
0	1	aaa	22
1	2	bbb	25
2	3	ccc	24
