1. Required libraries are imported

```
import numpy as np
import pandas as pd
import matplotlib.pyplot as plt
import seaborn as sns
import keras
from sklearn.model_selection import train_test_split
from sklearn.preprocessing import LabelEncoder
from keras.models import Model
from keras.layers import LSTM, Activation, Dense, Dropout, Input, Embedding
from keras.optimizers import RMSprop
from keras.preprocessing.text import Tokenizer
from keras.preprocessing import sequence
from keras.utils import to_categorical, pad_sequences
from keras.callbacks import EarlyStopping
%matplotlib inline
```

2. Read dataset and pre-processing

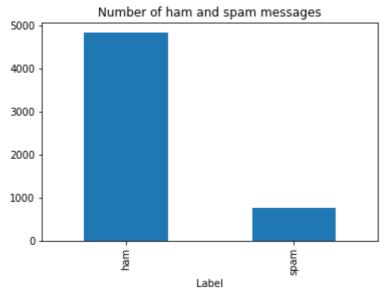

plt.xlabel('Label')

plt.title('Number of ham and spam messages')

```
df = pd.read_csv('/content/spam.csv',delimiter=',',encoding='latin-1')
df.head()
```

```
Unnamed:
                                                                          Unnamed:
                                                                                       Unnamed:
            v1
                                                        v2
                                                                                  3

      2
                                                                  NaN
                                                                               NaN
                                                                                            NaN
          spam
                                                     fina...
                     U dun say so early hor... U c already then
      3
           ham
                                                                  NaN
                                                                               NaN
                                                                                            NaN
df.drop(['Unnamed: 2', 'Unnamed: 3', 'Unnamed: 4'],axis=1,inplace=True)
df.shape
     (5572, 2)
#plot the ham and spam messages to understand the distribution
df['v1'].value counts().plot(kind='bar')
```

Text(0.5, 1.0, 'Number of ham and spam messages')

```
X = df.v2
Y = df.v1
#label encoding for Y
le = LabelEncoder()
Y = le.fit_transform(Y)
Y = Y.reshape(-1,1)
```

3. Train-test split

```
#split into train and test sets
X_train,X_test,Y_train,Y_test = train_test_split(X,Y,test_size=0.20)
```

4. Tokenizer

```
max_words = 1000
max_len = 150
tok = Tokenizer(num_words=max_words)
tok.fit_on_texts(X_train)
sequences = tok.texts_to_sequences(X_train)
sequences_matrix = keras.utils.pad_sequences(sequences,maxlen=max_len)
```

5. Add Layers(LSTM, Dense-(Hidden Layers), Output)

```
inputs = Input(name='inputs',shape=[max_len])
layer = Embedding(max_words,50,input_length=max_len)(inputs)
layer = LSTM(64)(layer)
layer = Dense(256,name='FC1')(layer)
layer = Activation('relu')(layer)
layer = Dropout(0.5)(layer)
layer = Dense(1,name='out_layer')(layer)
layer = Activation('sigmoid')(layer)
```

6. Create Model

model = Model(inputs=inputs,outputs=layer)

7. Compile the Model

model.summary()
model.compile(loss='binary_crossentropy',optimizer=RMSprop(),metrics=['accuracy'])

Model: "model"

Layer (type)	Output Shape	Param #
inputs (InputLayer)	[(None, 150)]	0
embedding (Embedding)	(None, 150, 50)	50000
lstm (LSTM)	(None, 64)	29440
FC1 (Dense)	(None, 256)	16640
activation (Activation)	(None, 256)	0
dropout (Dropout)	(None, 256)	0
out_layer (Dense)	(None, 1)	257
<pre>activation_1 (Activation)</pre>	(None, 1)	0

Total params: 96,337 Trainable params: 96,337 Non-trainable params: 0

8. Fit the Mode

model.fit(sequences_matrix,Y_train,batch_size=128,epochs=10,validation_split=0.2,callbacks

9. Save the Mode

model.save('spam_lstm_model.h5')

10.Test the Model
